SUMMARY

Software engineer with hands-on experience building full-stack and backend systems using Java, JavaScript, React.js, Node.js, and Express.js. Experienced in developing REST APIs, microservices, JWT-based authentication, asynchronous job processing, real-time communication, and Redis-backed systems. Built AI applications using PyTorch, Hugging Face, Mistral-7B, Legal-BERT, and LoRA, with a focus on practical reasoning and end-to-end system development.

EDUCATION

Master of Computer Applications (MCA) – VIT VELLORE | CGPA – 8.12 | 2027

Bachelor of Computer Applications (BCA) – IEM KOLKATA | CGPA – 7.88 | 2024

TECHNICAL SKILLS

Languages: Python, Java, C, JavaScript, HTML

Database: MongoDB, SQL, PostgreSQL

Web Development: React.js, Node.js, Express.js, CSS3, REST API, Backend Development

Machine Learning: TensorFlow, PyTorch, Scikit-learn, NLP models, pandas

Core Concepts: Data Structures, Algorithms, OOP, DBMS, Operating Systems, Cloud Deployment

Architecture: MVC, Authentication (JWT), CRUD Operations, Microservices, CI/CD

Tools: Git, GitHub, VS Code, npm, Postman, Kafka, Redis, AWS, EC2, S3, Lambda, Docker

EXPERIENCE

FRONTEND DEVELOPER | Jun 2024 - Jul 2024

(TECHPLEMENT- Internship)

- Integrated REST APIs and integrated Stripe improving checkout success rate by 75%.
- Used React hooks to manage state and component lifecycle efficiently. Ensured cross-browser compatibility and mobile responsiveness.

PROJECTS

1. FamilyWellcare - <https://github.com/Subhajit7710/FamilyCareBackend>

Tech: React, Express.js, Microservices, API Gateway, REST, JWT, MySQL, Sequelize, BullMQ, Socket.IO, Redis Pub/Sub, Bull Board, Postman

- Designed shared health status dashboards with API-driven data synchronization, enabling real-time visibility of medication adherence for family members within each group and reducing information delays by approximately 40%.
- Implemented an asynchronous medication reminder pipeline using **Redis** and **BullMQ**, incorporating delayed jobs, retries, exponential backoff, and Bull Board for queue monitoring and debugging.
- Implemented **Socket.IO with Redis Pub/Sub** for real-time medication and family-status updates, using family specific rooms to efficiently broadcast events to connected members.

2. JustAdvisor AI - https://github.com/Subhajit7710/JustAdvisor_AI

Tech: Python, PyTorch, Hugging Face, Mistral-7B, Legal-BERT, JSON, System Design

- Built an AI-powered courtroom simulation system to structure unorganized legal arguments and generate fact consistent, cumulative verdicts, improving argument clarity and interpretability by 45%, compared to raw input processing.
- Fine-tuned the Mistral-7B large language model using LoRA adapters to act as a neutral AI judge, enabling multi argument legal reasoning while reducing fine-tuning computing requirements by nearly 70%.

CERTIFICATIONS & ACHIEVEMENTS

• **ACCENTURE JOB SIMULATION** | Jul 29, 2024

- Led a team of 4 members, coordinating preparation and strategy for technical problem-solving round
